

All-Electric MINI Ace man (DATE 02/2025)	
<p>El grupo BMW asume los principios básicos de la sostenibilidad tomando medidas de forma proactiva para evitar el uso de determinadas sustancias químicas en la producción de sus vehículos. Por ello, los productos solo contienen sustancias imprescindibles por razones técnicas. Estas sustancias están integradas en los materiales, de modo que su liberación queda reducida a un nivel mínimo siempre que el producto se use según lo previsto. Por esta razón, el peligro para seres humanos y para el medio ambiente se puede excluir con una certeza casi absoluta. Esto implica que el vehículo y sus componentes se usen según lo previsto y respetando las instrucciones de funcionamiento y que las medidas de mantenimiento y reparación sean realizadas por expertos siguiendo las normas técnicas y los métodos recomendados. El manejo seguro del producto se especifica en el correspondiente manual. Este manual refleja nuestro afán de fomentar la sostenibilidad tanto en la producción, la elaboración y el uso de nuestros productos. Nuestras instrucciones e informaciones referentes a la reparación, las actividades de mantenimiento y las piezas de repuesto originales de BMW contienen además advertencias de seguridad a contemplar por parte del personal de servicio. Según la normativa de la eurozona, un vehículo usado solo puede ser eliminado en una empresa oficialmente autorizada para el reciclado de vehículos usados. Los componentes del vehículo se deberán eliminar asimismo de acuerdo con la normativa local y las autoridades competentes.</p>	
<p style="text-align: center;">Difusión de informaciones según el artículo 33 de REACH</p> <p>Este vehículo se compone de productos especificados en el artículo 3(3) del Reglamento (CE) n° 1907/2006 del Parlamento Europeo y del Consejo relativo al registro, la evaluación, la autorización y la restricción de las sustancias y preparados químicos (REACH). Según el artículo 33, todo fabricante se compromete a poner a disposición información sobre las sustancias contenidas en sus productos. Este vehículo, incluidos todos los componentes del producto, contiene sustancias que cumplen los criterios especificados en el artículo 57 y que según el artículo 59(1) se detectan en una concentración de más del 0,1 por ciento en peso. Informamos además de que en casi todos los grupos de productos se utiliza la substancia plomo (n.º de registro CAS 439-92-1), principalmente como componente de aleación. Además, el plomo también puede encontrarse como componente en materiales metálicos reciclados.</p>	
Name of substance meeting the criteria in Article 57 and identified in accordance with Article 59(1) in a concentration above 0,1 % weight by weight (Typical use according to the REACH Annex XV Dossier)	Location of article containing the substance in the product (Detailed, including optional equipment)
6,6'-Di-tert-butyl-2,2'-methylene-bis-p-cresol (typically for production of polymers and rubbers)	Powertrain (Coolant pump with drive) Chassis (Steering column) Body (Bonnet latch, locks and fittings, Window mechanism with electrical control in front door, Window mechanism with electrical control in rear door) Entertainment and Navigation (Anti-theft device) Body (Safety belts)
2-Methyl-1-(4-methylthiophenyl)-2-morpholinopropan-1-one (typically used in coatings, paints and fillers)	Interior (Rear seats) Electronic (Rear light cluster) Entertainment and Navigation (Antenna)
2-Methylimidazole (typically as hardener in epoxy resins and for production of adhesives)	Interior (Front seats)
4,4'-Isopropylidenediphenol (typically for production of polymers and resins)	Electronic (Control units, modules)
Bis(α , α -dimethylbenzyl) peroxide (typically used for production of polymers and as a processing aid and cross-linker in polymers)	Chassis (Front wheel brakes, Rear wheel brakes, Brake control (Hydraulic system)) Interior (Rear seats) Electronic (Inner lights) Heating and air conditioning (Air conditioner) Entertainment and Navigation (Loudspeaker and cover)
Diazene-1,2-dicarboxamide, ADCA (typically as blowing agent in plastic and rubber manufacturing)	Body (Bodyshell, External fittings) Interior (Rear door trim panel with armrests, Instrument panel, Insulating panel, Aerodynamics body) Body (Colours, paints and basic material) Interior (Rear seats, Sliding roof) Electronic (Cable harness) Heating and air conditioning (Particle filter)
Diboron trioxide (typically for production of borosilicate and crystal glass)	Chassis (Front axle suspension, Rear axle with mounting, wheel control, Electrical components (wear indicator)) Interior (Mirrors, sun visors, ashtrays, trays) Body (Boot lid latch, locks and fittings) Interior (Headlining) Electronic (Plug-connection cable, clamp, Battery with holder, Switch, sensor) Entertainment and Navigation (Video and tv-sets)
Cobalt(II) dinitrate (typically for surface treatment)	Body (Colours, paints and basic material)
Decamethylcyclopentasiloxane (typically as feedstock for the production of silicone polymers)	Electronic (Cable harness, Brake lights)
Dibutylzinnidichlorid (typically as additive in rubber, stabiliser in PVC plastics, catalyst in the production of polyurethanes and silicones)	Interior (Front panel, body front end)
Dicyclohexyl phthalate (typically as plasticizer for production of polymers)	Chassis (Steering column)
Dodecamethylcyclohexasiloxane (typically as feedstock for the production of silicone polymers)	Electronic (Brake lights)
Imidazolidine-2-thione (typically for production of polymers and rubbers)	Body (Door locks, grab handles and front fittings, Door locks, grab handles and rear fittings) Interior (Front seats) Entertainment and Navigation (Loudspeaker and cover)
Octamethylcyclotetrasiloxane (typically as feedstock for the production of silicone polymers)	Electronic (Cable harness, Brake lights) Heating and air conditioning (Heater with control, seat heating)
Triphenyl phosphate (TPP); (typically used for adhesives and sealants, coating products)	Chassis (Steering column) Interior (Mirrors, sun visors, ashtrays, trays) Entertainment and Navigation (Video and tv-sets)
2,2',6,6'-tetrabromo-4,4'-isopropylidenediphenol (typically as flame retardant and as additive in plastics and resins)	Interior (Mirrors, sun visors, ashtrays, trays) Body (Window mechanism with electrical control in rear door) Electronic (Control units, modules) Heating and air conditioning (Heater with control, seat heating) Entertainment and Navigation (Airbag-releasing device) Drive Assistance (Heading control, Interior camera)
Melamine (typically used in coatings, inks, resins and polymers)	Powertrain (Coolant pump with drive) Interior (Rear seats) Electronic (Switch, sensor, Rear light cluster) Entertainment and Navigation (Video and tv-sets) Drive Assistance (Adaptive cruise control) Body (Safety belts) Communication (Off-hands mobile communication)
Medium-chain chlorinated paraffins (typically as flame retardant and as additive in plastics, sealants, rubber, textiles)	Chassis (Rear axle suspension)
Bumetizole (typically as plasticizer for production of polymers and paints)	Chassis (Steering column)
Cobalt(II) nitrate hexahydrate (typically as additive in magnets for electronic assemblies)	Electronic (Head-up Display)
2-(2H-benzotriazol-2-yl)-4-(1,1,3,3-tetramethylbutyl)phenol (typically as dispersing agent in coatings, adhesives, sealants, printing inks, fillers)	Body (Badges, stickers, adhesive foils) Interior (Mirrors, sun visors, ashtrays, trays, Sliding roof) Electronic (Switch, sensor, Rear light cluster, Rear lights, rear fog lights) Entertainment and Navigation (Loudspeaker and cover) Drive Assistance (Interior camera) Communication (Off-hands mobile communication)
2-benzyl-2-dimethylamino-4'-morpholinobutyrophenone (typically for adhesives, sealants, coatings and inks)	Chassis (Anti-block system)
Bis(2-(2-methoxyethoxy)ethyl)ether, tetraglyme (typically as process solvent)	Electronic (Rear light cluster, Rear lights, rear fog lights, Brake lights)

The information provided in this document related to material and substance content represents our knowledge and belief, which may be based in whole or in part on available information provided by suppliers to us. Additional information: Certain inorganic oxides are bound in glass or ceramic matrices that change their individual substance properties as well as their communication duties under REACH. Similar changes occur with certain precursors that are bound in polymers as well as certain solvents that are part of contained mixtures in a vehicle.

*Conformément au décret 2021-1110, la substance présente des propriétés de perturbation endocrinienne.
